Project Description

We use Movies Api that provides from (https://www.themoviedb.org/?language=en) and it has a lot of services

We use this Services and impelemented it in two android application

Services

Note(first service in application one(Movies) and other services in application two)

First Service:

Search it can help you to search any movie and show information about this movie like vote rate

original titel and reales date and it founded in application one (Movies)

Second Service:

Discover Popularity it can help you to discover the most

popualrity movies

Third Service:

Highest Rate it can help you to discover the Higest rate movies

Furth Service:

You can search the movies in aspasific Year and it show all movies in this year

Fifth Service:

Best Daram it can help you to discover the Best Drama movies

I use **Android Studio** to impelement this application
